distance aid for placing between old holes
print on transparent for optimal use
(turn off using layer funtion)

toe line is not necessarily 15mm distant to pin line - in case of doubts, orient template on pin line

1/2 sole length to mounting point

For midsole position:

- check on your boot, whether the boot center mark is really in the middle (for some boots it isn't)

- align with scale on toe and heel template to mid sole mark on ski (or measure 1/2 sole length from toe/heel edge to mid sole mark)

- when the template is fixed to the ski, check with your bindings and boots inserted, whether positioning is correct (also for screw positions)

NOT YET VERYFIED - USE WITH CAUTION
